<b>Preface</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Environmental Problems and Geochemical Modeling	1
1.1.1 High-Level Radioactive Waste Disposal	1
1.1.2 Mining Related Environmental Issues	4
1.1.3 Landfills	8
1.1.4 Deep Well Injection of Hazardous Wastes	8
1.1.5 Artificial Recharge to Aquifers	9
1.2 The Regulatory Framework	11
1.2.1 CERCLA or Superfund	11
1.2.2 RCRA	11
1.2.3 NEPA	11
1.2.4 Clean Water Act	12
1.2.5 Safe Drinking Water Act	12
1.3 The Role of Geochemical Modeling	12
1.3.1 Contamination Issues	12
1.3.2 Water Resource Issues	13
1.4 Current Practice	14
1.4.1 Model Usage	14
1.4.2 The State of the Art	16
1.5 Overview	16
<b>2 Model Concepts</b>	<b>19</b>
2.1 Model Definitions	19
2.2 A Holistic View of Geochemical Models	20
2.3 Types of Geochemical Models	24
2.3.1 Speciation–solubility Models	24
2.3.2 Reaction Path Models	25
2.3.3 Inverse Mass Balance Models	27
2.3.4 Coupled Mass Transport Models	28
2.4 Model Verification and Validation	29
2.5 Model Usefulness and Limitations	31

---

<b>3</b>	<b>Thermodynamic Background</b>	<b>33</b>
3.1	Systems and Equilibrium	33
3.1.1	Real and Model Systems	33
3.1.2	Equilibrium	34
3.1.3	The Role of Kinetics	35
3.2	Chemical Reactions	35
3.3	Gibbs Energy	36
3.3.1	Enthalpy and Entropy	37
3.4	Activity, Fugacity, and Chemical Potential	38
3.4.1	Activity and Fugacity	38
3.4.2	Activity Coefficients	39
3.4.3	Chemical Potential	43
3.5	The Equilibrium Constant	43
3.5.1	Direct and Indirect Determination of $K$ values	45
3.5.2	Solubility Product and Saturation Index	45
3.5.3	Dependence of $K$ on Temperature	46
3.6	Components and Species	47
3.6.1	Components and the Basis	47
3.6.2	Species	47
3.6.3	An Alternative Basis	48
3.7	The Phase Rule	52
3.7.1	The Extensive Phase Rule	54
3.8	Redox	55
3.8.1	Oxygen Fugacity, $\log f_{\text{O}_2}$	56
3.8.2	Redox Potential, $Eh$	58
3.8.3	Electron Potential, $pe$	59
3.9	Alkalinity	59
3.9.1	The Carbonate Component	60
3.9.2	Carbonate Speciation	60
3.9.3	Titration Alkalinity	62
3.9.4	The Alkalinity to Carbonate Component Correction	64
3.10	Acidity	66
3.10.1	Titration Acidity	66
3.10.2	The Acidity to Carbonate Component Correction	67
3.10.3	Alkalinity and Acidity: A Summary	68
3.11	The Local Equilibrium Assumption (LEA)	68
3.11.1	Scales of Interest	70
3.11.2	Calculation of $t_{\text{eq}}$ and $l_{\text{eq}}$	70
3.12	Summary	74
<b>4</b>	<b>Computer Programs for Geochemical Modeling</b>	<b>77</b>
4.1	Codes, Databases, and Models	77
4.1.1	The Code	77
4.1.2	The Database	78
4.2	Review of Popular Computer Programs	79
4.3	Databases	82

---

4.3.1	A Typical Database	82
4.3.2	Data Quality	84
4.4	Chemical Concentration Units	86
4.5	Examples of Input/Output	86
4.5.1	Program Input	86
4.5.2	Program Output	93
<b>5</b>	<b>Preparation and Construction of a Geochemical Model</b>	<b>95</b>
5.1	Introduction	95
5.2	Establish the Goals	95
5.3	Learn the Groundwater Flow System	95
5.4	Collection of Field and Laboratory Data	96
5.4.1	Decide Which Parameters to Measure for Groundwater	96
5.4.2	Characterize the Solids	97
5.4.3	Evaluate Quality of Water Analyses. Charge Balance I	97
5.5	Decide What Types of Model to Construct	100
5.6	Gather Chemical Properties	103
5.7	Select a Computer Code	104
5.8	Set Up a Model	104
5.8.1	Basis Swapping	104
5.8.2	Charge Balance II	105
5.9	Interpretation of Modeling Results	106
5.9.1	Accuracy and Completeness of the Database	106
5.9.2	Input Constraints	107
5.9.3	Who produced the model?	107
5.10	Reporting and Presentation of Modeling Results	107
<b>6</b>	<b>Speciation and Solubility Modeling</b>	<b>109</b>
6.1	Introduction	109
6.2	A Uranium Mill Tailings Impoundment	110
6.2.1	The Site	110
6.2.2	The Purpose of Geochemical Modeling	111
6.2.3	Site Geology and Data	114
6.2.4	Selection of Modeling Code and Model Input	115
6.2.5	Geochemical Modeling	116
6.2.6	Modeling Results	117
6.2.7	Analysis of Mineral Saturation Indices	117
6.2.8	Activity–Activity Diagrams	124
6.2.9	Geochemical Evolution Along A Flow Path	126
6.2.10	Comments on the Bear Creek Site	128
6.3	Applications to Bioavailability and Risk Assessment Studies	129
6.4	Interpretations of Column Experiments	131

---

<b>7</b>	<b>Modeling Surface Adsorption</b>	<b>137</b>
7.1	Introduction	137
7.1.1	The Solid–Water Interface	137
7.2	Ion Exchange	138
7.2.1	Cation Exchange Capacity	138
7.2.2	Exchange Reactions	139
7.2.3	Isotherms	140
7.2.4	Ion Exchange vs. Surface Complexation	142
7.3	Surface Complexation	142
7.3.1	The Electrical Double layer	143
7.3.2	Other Surface Models	146
7.4	Sorption Implementation in Computer Programs	146
7.4.1	Examples	147
7.4.2	Why Surface Modeling is Not Perfect	152
7.5	Retardation of Radionuclides at Oak Ridge	152
7.6	Mobility of Radionuclides at a Uranium Mill Tailings Impoundment	155
7.6.1	Why Geochemical Modeling?	156
7.6.2	Modeling Approach	156
7.6.3	Modeling Results	157
7.6.4	Comparison with Field Data	157
7.6.5	Discussion of Modeling Results	159
7.7	Adsorption of Arsenic in Smelter Flue Dust	159
<b>8</b>	<b>Reaction Path Modeling</b>	<b>161</b>
8.1	Introduction	161
8.2	Alkalinity Titration	163
8.3	Acidity of Acid Mine Water	165
8.4	pH Buffering	168
8.5	Deep Well Injection of Hazardous Wastes	171
8.5.1	Background	171
8.5.2	A Case Study	173
8.6	Pit Lake Chemistry	178
8.7	Artificial Recharge	181
8.8	Applications to Natural Background Studies	182
<b>9</b>	<b>Inverse Mass Balance Modeling</b>	<b>185</b>
9.1	Introduction	185
9.2	Model Assumptions	186
9.3	Groundwater Genesis, Black Mesa, Arizona	188
9.4	Acid Mine Drainage, Pinal Creek, Arizona	192
9.5	<sup>14</sup> C dating, Black Mesa, Arizona	197
9.6	Estimate of Microbial Metabolism Rates in Deep Aquifers	200
9.6.1	Chapelle and Lovley (1990)	200
9.6.2	Murphy and Schramke (1998)	202

---

<b>10 Coupled Reactive Transport Models</b>	<b>205</b>
10.1 Introduction	205
10.2 Multi-component Reactive Transport Models	206
10.3 Isotherm-based Reactive Transport Models	207
10.3.1 Linear Isotherm, $K_d$	207
10.3.2 Freundlich isotherm	208
10.3.3 Langmuir isotherm	208
10.3.4 Applicability of the Isotherm-Retardation- Factor Based Reactive Transport Models	208
10.4 A Simple Example	211
10.5 Buffering in Reactive Transport	217
10.5.1 The Buffer Concept	217
10.5.2 Application of the Buffer Concept	218
10.6 Migration of an Acid Plume at a Uranium Mill Tailings Site	221
10.6.1 Model Description	221
10.6.2 Modeling Results	224
10.7 Remedial Design of a Uranium Tailings Repository	231
10.8 Summary and Comments	235
<b>11 Kinetics Modeling</b>	<b>237</b>
11.1 Introduction	237
11.2 Some Basic Theory	237
11.2.1 The Progress Variable	237
11.2.2 The Reaction Rate	239
11.2.3 Rate Laws	240
11.2.4 Temperature Dependence of Rate Constants	242
11.3 Kinetics of Precipitation and Dissolution Reactions	244
11.4 Kinetics of Acetate Decomposition	248
11.5 Coupled Aqueous Speciation and Biological Processes	254
11.6 Application to Landfill Leachate into Aquifers	256
11.7 Conclusions	258
<b>Appendix</b>	<b>260</b>
<b>A Modifying a Database</b>	<b>261</b>
A.1 Why Modify a Database?	261
A.1.1 Adding Arsenic Data to PHREEQC	262
<b>References</b>	<b>268</b>
